1 Item - List

Item	#	Weight[g]	Weblink	Picture
OpenCR Board (Controlling the motors, IMU)	1	60	github_wiki	
UpBoard (Main PC)	1	80	???	
Intel RealSense R200	1	9.4	datasheet	
LaserSensor	1			
Battery: LI-PO 11.1 1800mAh LB-12 19	1			
Turtlebot3 Layers()	4			
XM430-W350-R Dynamixel (Motors)	3			
Ball (aluminium, diameter: 140mm)	1	400		
Omni wheels(dia: 60mm, thickness:25mm)	3	46	buy here	
TODO:				

1. Abmessungen von einer struckture layer
2. welches upboard verwenden wir 2 oder das normale

2 Simulation

2.1 Launch

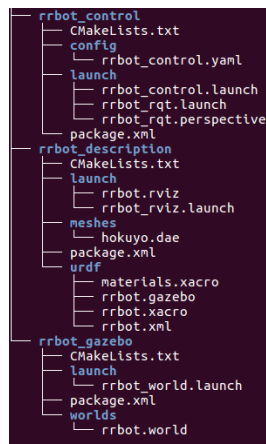

These files are executed one after another:

1. bb_simulation: ballbot.launch
2. bb_description: bb_description.launch
3. bb_description -> urdf: bb.xacro
4. bb_description -> urdf: bb.urdf.xacro
5. bb_description -> urdf: common_properties.xacro
6. bb_description -> urdf: bb.gazebo.xacro

2.2 Simulation design

Ballbot SDF Reference: [Ballbotmodel](#)

We use not the sdf but the xacro description as in this example [here](#).

Gazebo uses different physics engines:

- Open Dynamics Engine (ODE) (Default)
- Bullet
- Dynamic Animation and Robotics Toolkit (DART)
- Simbody

which all have different friction etc. models.

Files:

- bb.urdf.xacro: Link's: Visual description of the Robot and its collision model(STL file). Pose Mass and Inertias. Joint's: Pose,axis,effort and velocity limits, friction.

- common_properties.xacro: Macros for color definition.
- bb.gazebo.xacro: gazebo references dynamics of the links: friction parameters (mu1,mu2),

Gazebo Parameter's List:

name(xacro)	description	value	sdf group
mu1	is the Coulomb friction coefficient for the first friction direction	1.0	ode
mu2	is the friction coefficient for the second friction direction (perpendicular to the first friction direction)	2.0	ode
kp	spring constant equivalents of a contact as a function of SurfaceParams::cfm and SurfaceParams::erp		ode
kd	spring damping constant equivalents of a contact as a function of SurfaceParams::cfm and SurfaceParams::erp.		ode
cfm	Constraint Force Mixing parameter.		ode
erp	Error Reduction Parameter.		ode
min_depth	Minimum depth before ERP takes effect.		ode
max_Vel	Maximum interpenetration error correction velocity. If set to 0, two objects interpenetrating each other will not be pushed apart.		ode
slip1	Artificial contact slip in the primary friction direction		ode
slip2	Artificial contact slip in the secondary friction direction.		ode
See:	ODESurfaceParams		

2.3 Gazebo Parameters

```
git@git.sim.informatik.tu-darmstadt.de:TurtleBot/jsonlab.git
git@git.sim.informatik.tu-darmstadt.de:TurtleBot/octave_rosbridge.git
```

2.4 Control

sobald diff drive plugin angeschaltet drehen sich die raeder viel zu schnell

2.4.1 Plugins

- gazebo-ros-control
- diff drive

2.4.2 Launch

```
roslaunch rrbot_control rrbot_control.launch
```

These files are executed one after another:

1. load config
2. controller_spawner

2.5 Sensors

2.5.1 IMU

We want to simulate the IMU of the opencr board. STRG+T to see imu topic values! [Imu of opencr board simulated](#)

Simulate like this: rviz rviz dann als fixed frame nimm: imu_link. Und add topic imu und waehle als topic ballbot/sensor/imu
