1 Item - List								
Item	#	W.[g]	Weblink	Picture				
OpenCR Board (Controlling the motors, IMU)	1	60	github_wiki	The state of the s				
UpBoard (Main PC)	1	96	127€					
Intel RealSense R200	1	9.4	datasheet, 84.15€					
Laser Distance Sensor	1	124	specs, 100€					
Battery: LI-PO 11.1 1800mAh LB-12 19	1	132	44.90€	SOLD TO SHARE AND TO SHARE AND THE SHARE AND				
Turtlebot3 Layers()	4			000				
W15400 W070 B B			1 250 0	DNUMOEL X-Series				
XM430-W350-R Dynamixel (Motors)	3	72	robotis,250€	0				
Ball(alum., dia.: 140mm, material thickness 2.5mm)	1	400	ball-tech gmbh,40€.					
Omni wheels(dia: 60mm, thickness:25mm)	3	46	10.38€	4				
T (D)	_	20						
Kreisring (PLA, 3D printeted)	1	28						
II 1/2 (DIA 2D 1/4 / 1)	9	10						
Halterung (PLA, 3D printeted)	3	18						
Mitnehmer (PLA, 3D printeted)	3	8						
Plain washer (Beilagscheibe), (PLA, 3D printeted)	3	0.8						
M3 (Mutter-Halterung-Kreisring-Layer) M2.5 (Kreisring-Layer)	$\frac{9}{2}$							
M3x8mm Halterung	6		Zylinderkopf (Imbus)					
M3x22mm Layer	3		Zylinderkopf (Imbus)					
M2.5x22 (Motoren-Halterung)	12		Sechskant					
M2.5x38 (Motoren-Rad)	3		Zylinderkopf (Imbus)					
M2.5x24 (Layer)	2		Zylinderkopf (Imbus)					
M2x6mm (Mitnehmer-Motor)	12		Zylinderkopf (Imbus)					

Total Cost: 1176 \in + Cost of opencr board and all plastic (incl. tb3 structure) and scrwes TODO:

- 1. Abmessungen von einer struckture layer
- 2. upboard1-link noch eintragen

2 Simulation

2.1 Launch

These files are executed one after another:

- 1. bb simulation: ballbot.launch
- 2. bb_description: bb_description.launch
- 3. bb_description -> urdf: bb.xacro
- 4. bb description -> urdf: bb.urdf.xacro
- 5. bb_description -> urdf: common_properties.xacro
- 6. bb description -> urdf: bb.gazebo.xacro

2.2 Simulation design

Ballbot SDF Reference: Ballbotmodel

We use not the sdf but the xacro description as in this example here.

Gazebo uses different physics engines:

- Open Dynamics Engine (ODE) (Default)
- Bullet
- Dynamic Animation and Robotics Toolkit (DART)
- Simbody

which all have different friction etc. models.

Files:

• bb.urdf.xacro: Link's: Visual description of the Robot and its collision model(STL file). Pose Mass and Inertias. Joint's: Pose, axis, effort and velocity limits, friction.

- common_properties.xacro: Macros for color definition.
- bb.gazebo.xacro: gazebo references dynamics of the links: friction parameters (mu1,mu2),

Gazebo Parameter's List:

name(xacro)	description	value	sdf group
mu1	is the Coulomb friction coefficient for the first friction direction	1.0	ode
mu2	is the friction coefficient for the second friction direction (perpendicular to the first friction direction)	2.0	ode
kp	spring constant equivalents of a contact as a function of SurfaceParams::cfm and SurfaceParams::erp		ode
kd	spring damping constant equivalents of a contact as a function of SurfaceParams::cfm and SurfaceParams::erp.		ode
cfm	Constraint Force Mixing parameter.		ode
erp	Error Reduction Parameter.		ode
\min_{depth}	Minimum depth before ERP takes effect.		ode
$\max_{\rm Vel}$	Maximum interpenetration error correction velocity. If set to 0, two objects interpenetrating each other will not be pushed apart.		ode
slip1	Artificial contact slip in the primary friction direction		ode
slip2	Artificial contact slip in the secondary friction direction.		ode
See: ODES	urfaceParams		

2.3 Gazebo Parameters

```
git@git.sim.informatik.tu-darmstadt.de:TurtleBot/jsonlab.git
git@git.sim.informatik.tu-darmstadt.de:TurtleBot/octave_rosbridge.git
```

2.4 Control

sobald diff drive plugin angeschaltet drehen sich die raeder viel zu schnell

2.4.1 Plugins

- gazebo-ros-control
- diff drive

2.4.2 Launch

roslaunch rrbot_control rrbot_control.launch

These files are executed one after another:

- 1. load config
- 2. controller_spawner

2.5 Sensors

$2.5.1~\mathrm{IMU}$

We want to simulate the IMU of the opencr board. STRG+T to see imu topic values! Imu of opencr board simulated

Simulate like this: rviz rviz dann als fixed frame nimm: imu_link. Und add topic imu und waehle als topic ballbot/sensor/imu

bbbb
